

## Product Technical Data Sheet

### Aluminum Pigment ZP7110

#### DESCRIPTION

ZP7110 is aluminium pigment produced in pellet form. It has good compatibility with a variety of polymers. Its glamorous metallic sparkle, safety of handling, and ease of dispersion make it highly suitable for making masterbatches, or direct use in final processing by injection molding, extrusion, blow molding or blown film processes in plastic industry.

- *Non-leafing*
- *Small particle size Corn-Flake*
- *Pelletized with PE wax*

#### SPECIFICATIONS

| Parameter                             | Specification |
|---------------------------------------|---------------|
| Physical form                         | Pellet        |
| Aluminium content (%)                 | 70            |
| Carrier (PE wax) (%)                  | 30            |
| Average particle size (micron)        | 10            |
| Specific gravity (g/cm <sup>3</sup> ) | 0.7           |

#### INCORPORATION

Avoid prolonged use of high-speed aggressive disperser during mixing. Excessive shear forces will damage the integrity of the aluminium flakes thus reducing the sparkle and brightness.

#### SAFETY AND HANDLING

Aluminum pigment should be stored in the original shipping container and kept tightly sealed. Store containers in a dry room at a temperature between 15 and 35 Celsius degree. Avoid exposure to direct sunlight, rain, and excessive humidity. After prolonged storage, the pigment should be re-tested before use to avoid unnecessary problems.
